Introduction:
Attention-deficit/hyperactivity disorder (ADHD) is a brain disorder, hyperactivity and impulsivity interferes with functioning or development on behaviour. ADHD is affected commonly childhood people. Generally these behaviour can appear as early as between the ages of 3 and 6 and can continue through adolescence and adulthood. Know a day’s One- to two-thirds of all children’s and adults are suffered ADHD. Homeopathy is best way to treat ADHD.

Inattention means a person wanders off task, lacks persistence, has difficulty sustaining focus, and is disorganized; and these problems are not due to defiance or lack of comprehension.

Hyperactivity means a person seems to move about constantly, including in situations in which it is not appropriate; or excessively fidgets, taps, or talks. In adults, it may be extreme restlessness or wearing others out with constant activity.

Impulsivity means a person makes hasty actions that occur in the moment without first thinking about them and that may have high potential for harm; or a desire for immediate rewards or inability to delay gratification. An impulsive person may be socially intrusive and excessively interrupt others or make important decisions without considering the long-term consequences.

Causes of ADHD
- Genes
- Cigarette smoking, alcohol use, or drug use during pregnancy
- Exposure to environmental toxins during pregnancy
- Exposure to environmental toxins, such as high levels of lead, at a young age
- Low birth weight
